

Orchidology Terrarium & Paludarium Orchid Catalog

Orchids for terrariums, paludariums and plantscapes

We have a selection of miniature and small epiphytic orchids which are suitable to be grown in terrariums , paludariums and plantscapes. They grow above the water line or soil , 10-15cm so that they are not too waterlogged.

Fertiliser

Orchids are light feeders requiring very little fertiliser so normal aquatic plant food or feeding methods suit them well and can be applied during watering.

Mediums

Epiphytic orchids can be grown on driftwood , mopani, dragone stone, spider wood, lava rock or even artificial mediums. A bit of sphagnum moss and or coir helps retain moisture.

Light

Some orchids can be grown under artificial light or low natural light conditions, such as sarcochilus, phaleanopsis, toolumnia . Dendrobiums and vanda require more intense natural light but not direct sunlight and if grown under LED lights they need to be placed directly under the lights. Be careful never to place your terrarium or paludarium in direct sunlight as they can quickly overheat .

Watering and humidity

Epiphytic orchids have special roots which absorb moisture from the air so growing them above the fishtank water line in a high humidity semi enclosed environment, suits them well. The orchids still require watering via drenching every few days allowing a few days before watering again

Flowering

The mini orchids will flower from 6-12 months. Successful flowering depends on cultivation conditions. Correct light , temperature , watering and humidity conditions will ensure successful flowering.

ORCHIDOLOGY PLANTSCAPE ORCHIDS

OMI DEN. KING ZIP

Minature purple splash orchid epiphyte

LIGHT: MEDIUM (2500 FC)

TEMP: 5-28 DEG C

HUMIDITY: 60%

MEDIUM: ON WOOD AND ROCK 15CM ABOVE WATER & SOIL LINE

SIZES & PRICING 60mm - 9cm pot |

"Now Only R75"
